

Dear Music and Cover Art Lover!

Congratulations on receiving your new Magic Vinyl Display(s) and thank you so much for supporting our quest to promote vinyl records and beautiful cover art. We are confident that your Magic Vinyl Display(s) will enhance the enjoyment of all your favourite vinyl records.

The Magic Vinyl Display is easy to wall-mount. Whether your walls are concrete, wooden or plasterboard, you can use the accompanying wall plug and screw to mount the magnetic wall dock. For concrete walls or wooden surfaces, use a 6mm drill bit. For plasterboard walls, use a 5mm drill bit.

Thanks to the magnetic properties of the mounting system, it's easy to align all displays evenly as you hang them from their single anchor points. Each magnetic wall dock offers enough leeway to slide the position of each display in any direction. This helps compensate for slight misalignments while mounting.

For safety reasons, the total weight of the records in the MVD should not exceed 3.8 kilo (8lb).

For optimal results, please follow these steps:

**Step 1**

Choose a desired wall location to mount your display(s). Before drilling, check for any hidden pipes or electrical cables. If the location is safe, mark it using a pencil. When mounting a row of displays, using a water level for increased accuracy is recommended.

**Step 2**

Drill a hole at the previously marked location. Make sure the hole is slightly deeper than the wall plug. A hole approximately 30-35mm deep should be sufficient.

**Step 3**

Regardless of material, its important that the drill bit creates a hole exactly (90°) perpendicular to the surface.

**Step 4**

If finger pressure isn't enough, a light tap with a hammer should be enough to push the plug all the way so that it aligns flush against the wall surface. Once complete, you may now secure the magnetic wall dock by screwing in the attached screw.
